The Frameless Immersive System is an innovative system that allows students to be immersed in the world of school while maintaining the interactivity of the touch screen solution.
Every student, regardless of age, can be an active participant in the classroom, accompanied by their teachers and classmates.
The structure allows the side walls to be tilted from 30° to 60°.
The structure also allows easy programming and adjustment of the screens thanks to its micrometric calibration systems, thus ensuring easy maintenance.
The boards can also be fitted at ground level for primary schools and at medium height for secondary schools.
