Kometa Storm Matrix- Professional Projector Outdoor case with heating and cooling system

The Kometa Storm Matrix was born from the idea of creating a custom-made outdoor protective shell for the EPSON EB PU2220 projector line and similar.
This product completes the last link in the complete and integrated range of hanging solutions for this family of professional projectors, the heart of Euromet's business.
A Shell specially designed for the projector that can also be used with the new MATRIX cages.

The innovative elements of this shell are:

- structure similar to the flight case that can be assembled and prepared directly in the warehouse and then transported with the cages and the projector ready to the place of destination
- possibility of installing both with cage and without cage
- the ease of stacking the machines directly with their own shell

STORM model means:

- heating system
- cooling systems
